Auto Ticket Classification using FLOW DESIGNER

3. Project Design Phase

Introduction

The project design phase defines how the automated laptop procurement solution will work inside ServiceNow.

Content

Proposed Design:

Employee → Catalog Item → Request → Approval → Flow Designer → Procurement/Fulfillment → Laptop Delivery

Main Components:

- Service Catalog – Used to request the standard laptop.
- Catalog Item – Contains laptop request information.
- Flow Designer – Controls the automated process.
- Approval – Handles required authorization.
- Fulfillment Task – Assigned to the appropriate IT/procurement team.
- Notifications – Inform users about important updates.

Flow Design:

Trigger: Laptop request is submitted.

Actions: Check request information, determine whether approval is required, send approval request, create fulfillment/procurement task, update request status, and send notification.

Conclusion

The project design phase establishes the overall structure of the automation process. Connecting the Service Catalog, approvals, Flow Designer, fulfillment tasks, and notifications creates a clear and organized laptop procurement workflow.
